

EESE BEng Final report 2025-26

The final report is assessed by your supervisor and at least one of the two project team assessors, who complete independent assessments.

The report must contain a title page, an abstract of no more than 300 words, a list of contents, and a list of figures / tables. Figures, tables and graphs should be numbered and properly captioned. If some of them are interleaved with the text and some collected together at the end of the report, the numbering system should indicate clearly where each is to be found. Pages should be numbered, starting with page 1 at the beginning of the first chapter.

Generally, you should assume that the reader of your report is an engineer but has no specialised knowledge of the project topic. Jargon and ambiguous abbreviations must be avoided. Abbreviations must be spelt out on first appearance unless they are universally understood (e.g. spell out PWM but not dc).

Project reports must be typed on A4 paper, using at least 1.5 line spacing and a minimum font size of 11 points (i.e. make it pleasing to the eye and easy to read). Conciseness is important, so the length of the main body of the report, excluding appendices, **must not exceed 30 pages**. Circuit diagrams, program listings and long passages of analysis (as evidence to back-up claims of tangible deliverables) should be put to appendices. Assessment of the report will be based on the first 30 pages of the main body of the report (and appendices may be used by the assessor only to ascertain their assessment). The most common mistake is to assume that there is any relationship between report length and mark awarded.

You are advised to examine a number of papers in professional journals and copies of PhD theses in the Main Library. The report should contain an introductory chapter or section outlining the aims of the project. A literature survey (which in some cases may be brief) should summarise any relevant published work in a suitably integrated manner and be embedded in the report. After giving all necessary details about the design, analysis and testing, the report should give a clear and concise discussion of the results and the conclusions drawn from them. Project Management should be included in an appendix. This should include the project gantt chart, an explanation of how milestones and deliverables were chosen the extent to which the project plan was adhered to and where changes were made.

Guidance on referencing can be found here:

[Referencing](#)

Students will submit the final project report electronically to Canvas

The PDF File

- The complete report must be presented in one single PDF file
- The first page of the PDF file must be a covering sheet following a standard template
- The appendices are not included in the total page count of the report.

- The appendices must include the general ethics questionnaire (followed, if required, by full ethics documentation). The final version of the risk assessment should also be included.
- Remember that it is essential that the evidence of your tangible deliverables (such as circuit diagrams, program listings, long passages of analysis, etc) is included in appendices.
- The total file size must be less than 20 MB
- The PDF file must be text-searchable. All reports will be submitted to the university's approved plagiarism detection service.

The cover sheet and self assessment.

The first page of your project report must be the standard EESE covering sheet. Templates for the covering sheet in Word and PDF formats can be downloaded here:

[EESE Project Cover Sheet and self assessment.doc](#) ↓ 

[EESE Project Cover Sheet and self assessment.pdf](#) ↓ 

In the box on the covering sheet you must enter:

- The text "BEng Final Year Project (EE3P)"
- Your name
- Your student ID number
- Your project title
- Your supervisor's name

Do not alter the formatting or layout of the covering sheet. You may include a formatted title page of your own as the third page in the report if you wish.

The cover page file also has a self assessment form for you to complete. This will be marked on a 0-3 scale but is worth 5% of the report mark. In order to obtain full marks you must provide an considered assessment of what you have learned about your abilities during the project which is explained in the free test boxes.

Example past reports can be found [here](#), but please note, they do not conform to the current page limit, which is 30 pages.

Submitting the report

[You must submit a single PDF file of your report here.](#)

The deadline for submission of the final report is 11:00 on Friday 8th May (UK time). Any reports submitted after the deadline will be subject to the usual late submission penalties unless you have been granted a deadline extension through the extenuating circumstances procedure.

Additional material

[Supporting files, such as code of your programs, may be submitted here.](#)

These files will **not** form part of the project assessment.

Learning outcomes being assessed

You will see these in the marking criteria which are explained below

However, for the Final report you need to make sure that you demonstrate the achievement of the learning outcomes below,

Explain what the goal of the project, why it was important and how the solution met the need in question.
How the problem has been addressed at a system level and how well it all fits together.
How well the project was managed in terms of planning and the achievement of milestones and deliverables
In the design of their solution the use of appropriate maths, science and/or engineering principles
The use of literature, data sheets etc to decide how to solve the problem and in the analysis of their results
How the hardware, software and other methods used in the solution of their problem were chosen and its testing and the justification of the choices
How much work has been done and how difficult was it? (tangible deliverables)
The analysis of results using maths science and/or engineering principles.
Communication skills

Report

Marks are specifically awarded for a systems approach. This means considering a problem as a whole. For hardware or software development, it means evidence of overall system design. For a study or investigation it means evidence of a systematic approach.

Critical analysis and tangible deliverables carry 35% of the marks. Analysis should relate results to the literature where possible.

Project Management

Project Management should be included in an appendix. This should include the project gantt chart, an explanation of how milestones and deliverables were chosen the extent to which the project plan was adhered to and where changes were made.

Self Assessment

The Engineering council requires that students on accredited degree programmes be able to “Plan and record self-learning and development as the foundation for lifelong learning/CPD”. We have added a self evaluation form to the cover template for the report to enable you reflect on what you learned during your project. It is worth 5% of the project report and full marks will only be awarded to considered self assessments and comments. I have provided an example of a good self evaluation.

[Self assessment example.doc](#) ↓ 

Appendix on Generative AI.

You must include an appendix on the use of Generative AI in the writing of the report. The template for this is here:

[Statement on Contribs of Gen AI to submission nz.docx](#) ↓ 

The University has guidance on the use of Generative AI in student's work. It can be accessed here:

[Student and PGR guidance on using GenAI tools ethically for work](#) 

Particular attention should be paid to points 7 and 8.

The School has guidance on generative AI

[SOE_GenAI_policy_for_students.pdf](#) ↓ 

The Final Report will be assessed using the following criteria:

Before applying the mark scheme below, the markers will apply the following English Language Proficiency criteria

Pass and above:

- *The work is written / spoken to an acceptable standard of English*
- *Spelling, punctuation, vocabulary, sentence construction, and textual coherence is of an acceptable standard.*

Fail:

- *Poor standard of written / spoken English, making it difficult to understand the points being made.*
- *Weaknesses of writing / speaking are so frequent or serious that they impede communication.*

%weight	Assessment category	Assessment criterion
5	Project identification	Were they able to explain what the goal of their project was, why it was important and how their solution met the need in question.
5	Systems approach	How well have they attempted to address their problem at a system level and how well it all fits together.
5	Project management	how well did they manage their project in terms of planning and the achievement of milestones and deliverables
10	Design and subject knowledge & understanding	In the design of their solution how well did they use appropriate maths, science and/or engineering principles
10	Research	How well have they used literature, data sheets etc to decide how to solve their problem and in the analysis of their results
15	Scientific methods and Practical testing	How well have they chosen the hardware, software and other methods in the solution of their problem and its testing and have they justified the choices
15	Substantialness of achievement	How much work have they done and how difficult was it? (tangible deliverables)
20	Analysis and interpretation of results	how well have they analysed their results using maths science and/or engineering principles.

10	Quality of report	what is the quality of their report in terms of style of writing, spelling, grammar and structure.
5	Self Evaluation	How well have they reflected on their learning in the conclusion of their report.

Please do not use the above list as headings in your report. remember that the assessors are looking for evidence of **your** contribution to the project. The layout of the report should be clear, logical and concise. Please consult your supervisor if in doubt. Considerable weight will be given to conciseness and clarity, and marks will be deducted for untidiness, illogical arrangement, vagueness, verbosity, irrelevance, incorrect English or poor spelling.

All reports will be subject to an electronic plagiarism search using a database of web-based resources and previous project reports.

NB: To avoid risking accusation of **plagiarism**, which is a serious offence, you are strongly advised to make sure you fully understand what plagiarism consists of and if in doubt you should discuss this with your supervisor. Any material from another source quoted directly in your report must be properly attributed, i.e. a reference given in the text and full reference details included in the reference list. However, the use of a substantial amount of quoted material is considered as a bad practice and will be marked down by the assessors as it does not demonstrate your understanding of the material. Note that the unquoted copying of text directly from other sources, even if referenced, is considered as plagiarism.

Heavy penalties, affecting degree class, have been applied in recent cases of inadequate attribution (referencing) of material. Conversely, a student who demonstrates that they are 'well read' and uses proper referencing tends to be awarded high marks – provided they demonstrate a working system!

Late Submission

Engineers normally have to work to stringent deadlines. Penalties for late submission will be applied at the rate of **5% per day**. If you believe you have a valid reason for late submission, this should be detailed in an extension to deadline request form (before the deadline) or an extenuating circumstances form (after the deadline). In both cases you must provide supporting evidence (e.g. a medical certificate) which will be used to decide whether a late submission penalty will be applied.

Delay arising from word processing and internet-access facilities will not normally be considered adequate excuse for late submission, as you are expected to allow time for such mishaps in your planning. Loss of computer files is not an adequate reason; it is essential to make frequent backups and keep them safe.

Problems with Canvas submission will only be considered in cases where an incident has been reported by Information Services.

The final report accounts for 60% of the final project mark. It should be remembered that every year there are cases of very able students failing to reach their potential as a result of poorly written Final Reports – please do spend some time in the Main Library reading a selection of papers in journals and PhD theses.
