

Figure 5.1 — Single-task FK training curves for the 5, 6 and 7 DoF configurations

Solid lines = training loss (smoothed; faded raw underneath); dashed lines = validation loss. Vertical dotted lines and markers indicate the per-DoF validation-loss minimum, the checkpoint saved by the training script and used for the test-set evaluation reported in Table 5.1. The widening train-val gap after the val minimum reflects the optimiser fitting training-set detail under a small learning rate, but this over-fit tail is not deployed.
